Keith Ostransky
RW Ag Processing
Des Moines, IA 67419

Dear Mr. Ostransky:

Through research of state-of-the-art hybridization processes, I became impressed by the recent advances made by RW Ag Processing in this field. I was therefore pleased to see your announcement in the Des Moines Register for a Customer Service Representative, a position for which I am uniquely qualified.

Coursework in agronomy at the University of Nebraska–Lincoln has provided me the technical expertise to appreciate and distinguish the subtle attributes of any number of hybrids. I have worked closely with faculty on research centering on soy bean hybrids, which not only gave me particular expertise in that crop, but also a solid grounding in the fundamentals of introducing, implementing, and assessing hybridizations of any kind. In addition to agricultural courses, I have taken business classes in marketing and accounting. In May of 2006, I will graduate with a Bachelor of Science degree from UNL with majors in both Agribusiness and Agricultural Economics and am eager to join a professional team such as that at RW Ag Processing.

To complement my technical expertise, I have served as a Student Ambassador for my college, which has trained me to be a confident and persuasive public speaker and to be able to think on my feet. Moreover, I have proven myself an effective leader and efficient manager through various on campus organizations and as Youth Coordinator for the Nebraska Department of Agriculture. Finally, I possess sound computer skills and am not afraid to learn new systems.

I am eager to explore employment options with RW Ag Processing and would appreciate an opportunity to meet with you personally regarding the Customer Service Representative position currently available with your organization. I have enclosed a resume for your review and look forward to hearing from you soon to arrange such a meeting.

Thank you for your time and consideration.

Sincerely,

(signature)

Lauren Adamson
