

Electricity and Magnetism II - Spring 2015

PHYS 914

MWF 12:30-1:20

JH 245

Instructor: Prof. Kirill Belashchenko

Office: 310D Jorgensen. Phone: 472-2396. E-mail: belashchenko@unl.edu

Office hours: MWF 3:30-5:00 or by appointment. You can also try to stop by my office if my door is open or email me with your questions.

Prerequisites: PHYS 913 (grade C or better) or permission.

Textbook: J. D. Jackson, Classical Electrodynamics, third edition. Note that the chapters are not covered consecutively. Some sections are omitted or covered out of order, and some material is not in the text.

Supplementary textbook: L. D. Landau and E. M. Lifshitz, The classical theory of fields. The presentation of the special relativity and covariant electrodynamics is based on this textbook.

Course description: This course develops the theory of time-dependent electromagnetic phenomena and includes the following topics: special relativity and covariant formulation of electrodynamics; Maxwell equations in vacuum and in continuous media; conservation laws in electrodynamics; electromagnetic waves, their reflection/refraction at interfaces and propagation in waveguides; dielectric response of materials; electromagnetic radiation; scattering of electromagnetic waves.

Homework: There will be approximately 8 assignments during the semester. The homework problems will have different weights according to the required effort. The solutions should clearly explain all the important steps. You may discuss ideas and approaches with other students *after* you have spent some time thinking about these problems. However, you are required to complete all the technical steps yourself. You are not allowed to copy the work of others or use problem solutions obtained from any source. If you have benefited from discussions with others, you must acknowledge these people in your homework. (Example: "I learned this idea from John Smith.")

Homework should be submitted in class or placed in my mailbox (request a time stamp from a staff member in the latter case). Please do not slide it under my office door. Late homework submissions may be accepted, but they will lose a percentage of points (typically 10-25% for reasonably short delays). Homework is graded by a teaching assistant. If you believe your grade to be incorrect, you may appeal it to the instructor within two weeks. *It is your responsibility to understand your mistakes.* If in doubt, always ask for a clarification.

In-class quick tests may occasionally offer short problems or conceptual questions based on recent coursework for about 20 minutes at the end of a class. They may or may not be announced beforehand.

There will be **one midterm exam** in the middle and a **comprehensive two-hour final exam** at the end of the semester. Provided that a suitable time can be found, the midterm exam will be scheduled for 1.5 hours. If a suitable time is not found, the exam will take place in a regular 50-minute class slot. Unless explicitly indicated otherwise, it is not allowed to use any books, notes, or other materials on the exams.

Missed tests: You must notify the instructor if you expect to miss a class for a legitimate reason (illness, family emergency, or job-related absence such as attending a conference; be prepared to provide supporting documentation). A minor test missed for such reasons may be dropped from your grade. If you miss the midterm or the final exam for any reason, you will normally not be able to obtain a passing grade for the course.

The participation grade will reflect your contribution to our everyday work in the classroom. Everyone is expected to take an active role in discussions. This grade includes such factors as answering questions, asking *relevant* questions, showing preparation and understanding of the assigned material, critical

thinking about physics, and other manifestations of active learning. As a general rule, you need to be regularly visible as a thoughtful discussion participant in order to get full credit for participation.

Grading: Your total score will be compounded as follows (subject to change depending on the actual schedule of assignments):

| | |
|----------------------|-----|
| Homework | 20% |
| In-class quick tests | 15% |
| Midterm exam | 25% |
| Final exam | 35% |
| Participation | 5% |

The scores for all assignments will be posted on Blackboard. Total scores for all students may be scaled at instructor's discretion depending on the difficulty of the tests. Based on the total score, the final grades will be determined as follows: A+ [92-100], A [88-92], A- [85-88], B+ [82-85], B [78-82], B- [74-78], C+ [70-74], C [65-70], C- [60-65], D+ [55-60], D [50-55].

Instructor replacements: The lectures may occasionally be given by a replacement instructor, who has full authority to assign homework and other assignments.

Changes: This syllabus represents a reasonably accurate outline of the course. However, we may deviate from it depending on our progress.

Students with disabilities are encouraged to contact the instructor for a confidential discussion of their individual needs for academic accommodation. It is the policy of the University of Nebraska-Lincoln to provide flexible and individualized accommodation to students with documented disabilities that may affect their ability to fully participate in course activities or to meet course requirements. To receive accommodation services, students must be registered with the Services for Students with Disabilities (SSD) office, 132 Canfield Administration, 472-3787 voice or TTY.
