Would $5000 feed your imagination?

The 2018 Innovation Fellows will be selected from talented undergraduates with interest and expertise in the following areas:

Design
Art
Computer Science
STEM Fields
Curriculum Development

Beyond School Bells and Nebraska Innovation Studio are seeking four creative ELO Innovation Fellows to bring new energy into Nebraska’s after-school and summer programs.

This Fellowship is not for the timid. Fellows will collaborate with leading Nebraska informal learning professionals to design, create and prototype exciting, engaging, hands-on informal learning experiences and activities for school-based and community powered after school and summer programs – what we call Expanded Learning Opportunity (ELO) programs.

The Innovation Fellows will bring together an elite set of skills in graphic design, technical drawing, after-school education, instructional design, fabrication, field research and data analysis and collaborate to solve real world problems.

Fellows will be required to work 10 hours per week as part of a collaborative, four-person Design Team. Each Fellow will receive a $5,000 stipend and an unparalleled portfolio of experiences helping to develop the best after school and summer experiences in the nation. The one-year fellowship begins in February and concludes in December. There will also be opportunities for optional paid summer engagement with ELO programs.

Applicants are invited to send a 500-word essay by January 15 on why you are interested and what unique skills and experiences you bring to the Design Team. Please attach a portfolio or other relevant work with your essay. Finalists will be selected for interviews.
